

Lunar Ascent Vehicle of the Artemis Project™

Illustrations by Vik Olliver

This “space motorcycle” is a minimalist vehicle for returning astronauts from the Moon. As the return trip is only a few hours long, it makes sense to leave the habitable portion of the mission on the surface for use next time, and to ascend using suits on a minimal structure. That's what this is, as conceived by Greg Bennett of The Artemis Project™.

The images above are all based on sculptures, so 3D images and Imax views etc. are available. These images are 640x480, but any resolution can be easily catered for in up to 24-bit colour.

More of the space art of Vic Oliver can be seen at
